

Flow Measurement of Gases & Clear Liquids with Float Series 6001 & 6002.

Measurement Principle

Variable area obtained by the displacement of a float in a conical, Borosilicate glass tube.

Applications

Commonly used in industry to measure the flow for:

- Water treatment.
- Chemical processes.
- Industrial Refrigeration & Air Conditioning.
- Research Laboratories.
- Gas Burners.
- Pilot Plants.
- Annealing Furnaces.

Benefits

- Easy Installation, no straight pipe required.
- Low pressure drop.
- Scaled directly in l/h, l/m, kg/h, %, mm, etc.
- Adjustable alarms, in all scales, operated magnetically or with infra-red light.
- Measuring tube in Borosilicate glass.
- Steel construction, coated with Polyamide 11.
- Connections in Steel, AISI-316, PVC & PTFE.

Operation

The fluid flows up through the tapered tube forcing the float to a position with sufficient free area to enable the flow to pass. This free area is related to the flow rate, the weight of the float and the density and viscosity of the fluid.

The pressure drop across the flow meter remains constant over the entire flow range. This occurs because the pressure drop is related to the fluid velocity and area of flow, the area of flow increases as the flow rate increases.

Technical Data

- Connections:
 - 6001 threaded 1/2" to 3" BSP
 - 6002 flanged DN-15 to DN-80, PN-16.
 - ASA, BST, 11851 (sanitary) available as specials.
- Length

	Minimum	Maximum
6001	410mm	510mm
6002	380mm	420mm
- Accuracy:
 - According to standards VDI/VDE 3513 Class 1.6
- Scales graduated in l/h, l/min, kg/h, %, mm, etc
 - Scale length 200mm $\pm 10\%$
- Rangeability 10:1
- Operating Temperature
 - Resistant to thermal shock to 180°C
 - Recommended Maximum Differential Temp 100°C
 - Operating Variation 70-80°C
- Materials

Series	Body /Protection	Float
6001-6002	Coated Steel	AISI-316
600../SS	AISI-316	AISI-316
600../PVC	PVC	AISI-316/PVC + Lead
600../PTFE	PTFE	AISI-316/PTFE + Lead
- Alarm Options:
 - 60-AMM 1...2 Magnetic Actuated micro switch.
 - 60-AMD 1...2 Inductive proximity sensor.
 - 60-AMO 1...2 Optical position detector.
 - 60-AMR 1...2 Magnetic actuated reed switch.

TYPE AC

TYPE ECG

As standard, the floats are made from AISI-316, PVC-Lead, PTFE-Lead for use in liquids, and Aluminium, PVC, PTFE for use with gases.

Other materials, also available when necessary to suit different fluids.

Equivalent flow curves for liquids with a different density or viscosity to water

FLOW /h

FLOW /h

Examples:

No. 1 Variation for Viscosity (Table 1)

Flow 1000l/h, viscosity 50mPas. Enter the graph at the viscosity value and travel vertically to the point where it cuts the horizontal line at 1000l/h. This point determines the tube selection and if it coincides with one of the curves, it is the value of maximum flow. If the point lies between two curves, it is optional to select either the upper or lower. The lower (C314-1600) will provide a maximum flow of 800l/h and the upper (C314-2500) will provide a maximum flow of 1800l/h.

No. 2 Variation for Density (Table 2)

Flow 1000l/h, density 1.4kg/l. Enter the graph at the 1000l/h point. Move horizontally across to applicable flow tube line (C313-1000), travel the inclined line to the point of the density of the fluid (1.4kg/l). Travel horizontally to the vertical axis and read the equivalent flow scale 800l/h.

No. 3 Variation for Viscosity and Density

First, follow the steps in example 1, then follow the steps in example 2.

Alarms

AMM/AMR/AMD

R	DN	A	B
1/2"	15	-	-
3/4"	20	132	45
1"	25	132	45
1 1/2"	65	175	45
3"	80	175	45

AMO

R	DN
1/2"	15
3/4"	20

Adjustable Alarm 60-AMM

(from 40-400 l/h Water & 0.7-7 Nm³/h Air)

Micro-switch contact, mounted in an aluminium enclosure, actuated by a magnetic field from the float.

- 60-AMM1...2: 1...2 adjustable alarm contacts.
- Power Supply: 220Vac (6A), 24Vdc (0.5A).
- Load: 6 Amp @ 220Vac/50Hz.
- Temperature: -25°C to +80°C.
- Hysteresis: ±10% of full scale.
- Mechanical life: 20 x 10⁶ Operations.
- Contact speed: 0.01 to 1 mSec.

Adjustable Alarm 60-AMD

(from 40-400 l/h Water & 0.7-7 Nm³/h Air)

Adjustable Inductive Alarm, based on plate & gap detection with 3.5mm NAMUR (DIN 19234), mounted in an aluminium enclosure, actuated by a magnetic field from the float.

- 60-AMD 1...2: 1 ... 2 adjustable alarm contacts. (+ amplifier WE77/Ex1 or Ex2).
- Power Supply: 8 Vdc.
- Temperature: -25°C to + 70°C.

Control Relay:

Model WE77/Ex 1...2: for 1 or 2 inductive alarms.

- Power Supply: 220VAC \pm 15%, 50-60Hz. (Also available in other voltages for AC & DC).
- Control circuit is intrinsically safe to EEx ia II C (Zone 0).
- Load: 4 Amps @ 250VAC/250 VA.
- Temperature: -25°C to + 70°C.

Optical Alarm, Series 60-AMO

(from 25-250 l/h Water & 0.4-4 Nm³/h Air)

Optical contact, in infra-red light, actuated by interruption of the beam with the float. Mounted in a PVC support, with the relay in a separate aluminium enclosure. The cable length between the control relay and sensor is 1,5 m.

- 60-AMO 1...2: 1 or 2 adjustable alarm contacts.
- Power Supply: 220Vac/50Hz or 24Vdc.
- Load: 1 Amp @ 220Vac/50Hz.
- Temperature: -10°C to + 50°C.
- Hysteresis: \pm 5% of full scale

Adjustable Alarm 60-AMR with REED

(from 40-400 l/h Water & 0.7-7 Nm³/h Air)

Reed switch contact, mounted in an aluminium enclosure, actuated by a magnetic field from the float.

- 60-AMR 1...2: 1...2 adjustable alarm contacts.
- Power Supply: 220Vac (1A), 24Vdc (1A).
- Load: 1 Amp @ 220Vac/50Hz.
- Temperature: -15°C to + 60°C.
- Hysteresis: \pm 5% of full scale.

Analog Transmitter 60 / TMUR 0...4-20 mA (From 40-400 l/h water and 0.7-7 Nm³/h air)

Electric analog transmitter using a reed chain mounted in a plastic housing which screws onto flowmeter main body.
Separate electronics mounted in a DIN 46277 rail mounting plastic case (IP 40).

- Power Supply: 220V, 110V, 24V 50-60 Hz or 24 Vdc
- Output Signal: 0-20 mA, 4-20 mA, 0-5 V, 0-10 V
- Connection: 4 wire
- Number of Steps: 20 maximum for full output range
- Precision: $\pm 7\%$ of full scale reading

DN	A
15 - 20	80
20 - 25	85
40	101
50	107
65 - 80	120
